DETAILED ACTION

Drawings

1. The drawings are objected to because Fig.1 should be designated by a legend such as – Prior Art --. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Casper (U.S. Patent No. 6,141,270).

Figure 1B of Casper discloses an integrated circuit comprising a sense amplifier (33), first (24) and second (25) bit lines coupled to the sense amplifier 33, a plurality of memory cells (19) coupled to the sense amplifier 33, the selected memory cell 19 would produce a differential on the bit lines (see column 4 lines 24-25), and a test circuit (26) coupled to the bit lines 24 and 25, when activated, varies the magnitude of the differential read signal ^{Casper's} see claim 3. To be more specific, a voltage differential across the sense amplifier would cause a voltage differential across bit lines.

Allowable Subject Matter

3. Claims 2-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

There is no teaching or suggestion in prior art to:

The memory cells comprise 2T2C memory cells as claimed in the dependent claim 2; or

The memory cells comprise 2T2C ferroelectric memory cells as claimed in the dependent claim 3; or

The first and second read signal forms the differential read signal, where one of the first or second read signal is equal to VLO or VHI as claimed in the dependent claim

4.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Porter (US Pat. No. 5,297,087) or Nevill et al. (US Pat. No. 5,982,682) discloses a test circuit for memory integrated circuits similar to that of Casper (US Pat. No. 6,141,270)
